Nifty Spot Chart

Technical Outlook

Tracking the global markets, Nifty Index opened Thursday's session on firm note at 10493 and from there it hit four mouths high of 10598 and finally settled at 10551 gaining 1.17%. In line with expectation, Index extended its gains by surpassing the previous high resistance and ended on the verge of it. Ahead, Nifty Index is likely move till swing low resistance placed around 10640 levels and these level are likely hold stiff. Therefore, failing to surpass that could provide corrective move till supports placed at 10440 then 10330. Following the firm global cues, SGX Nifty is also up by 40 points indicates a positive opening of domestic indices, however we might see some selling pressure building up at higher levels in the later part of the session.

Bank Nifty Spot Chart

Technical Outlook

After opening on positive note at 22133, Nifty Bank index surged till the high of 22344, but it failed to hold gains till the end and finally settled with minor losses at 21953 mark. Despite Nifty Bank Index crossing 22000 mark during intraday it experienced huge selling pressure and slipped down below at the end. Now the immediate supports are placed at 21720 then 21280 and on the higher side resistance seen at 22479 of previous high and next hurdle is seen around 23000 mark. The volume continued to remain stagnant and stochastic oscillator has made positive cross over signifying bullish signs. Thus for the day, we expect Bank Index to test the previous high levels of 22500 and convincing break of that will prolong further up move, else we could see some profit booking coming up in the later part of the day.
