ICICI Bank posted a stable quarter with an all-round performance while facing some stringent regulatory changes announced during the quarter. Post implementing RBI guidelines pertaining to increase in risk weights on unsecured and NBFC lending, CET-1 ratio (including 9MFY24 profits) stands at 16% highlighting strong capital position the bank currently holding. Management has clarified that ~6.8% of portfolio consists of lending towards NBFCs and HFCs. Exposure to NBFCs is monitored very closely and in-fact couple of NBFCs have made pre-payments during the quarter. On unsecured lending front, bank has increased product pricing of personal loans.

Amid high interest rate scenario and liquidity crunch, cost of funds increased by ~20 bps sequentially. However, bank's ability to limit NIMs contraction to 10bps, showcase resilient borrowings mix and robust franchise it has developed over the years. Additionally, bank's strong focus on strengthening distribution reach via branch expansion would certainly enhance capabilities to capture CASA deposit market, thus, improving control over cost of deposits.

At CMP of ₹999.20, the stock is traded at a P/BV ~2.8x FY25E. Resilient performance in-terms of loan book growth, asset quality improvement and branch network expansion, digital advancements with focus on customer centric approach highlights strong underlying fundamentals of the bank. Given the price underperformance by the bank and healthy quarterly performance, we believe these levels could act as strong support to the stock, and thus to it is expected to generate good returns over the medium term and we maintain our stance to **Buy** the stock and **add on dips**.
